

SRC Auxiliary Applications

The following applications can be integrated with SRC components or applications:

- Application Server on page 1

Application Server

To run a residential portal, the Enterprise Manager portal, or other enterprise portals you need an application server in your SRC environment you need an application server. Typically, you should use a J2EE application servers that includes a Web application server.

The Web application server should support JavaServer Pages (JSP) technology. JSP pages are Web pages that contain Java code and JSP tags (similar to HTML tags) embedded in normal HTML. The Java code and JSP tags produce dynamic HTML content and invoke the SAE functionality.

For use on a Solaris platform, the SRC software provides the JBoss application server as a convenience to let you quickly set up an SRC environment. This application server is J2EE compliant and supports the J2EE applications that the SRC software offers.

We have tested the SRC software with other application servers. For a list of the application servers that we have tested with the SRC software, see the release notes.
