

Attributes in SRC Configuration Files

You can add the following attributes to text files or to XML tags in a configuration file to be loaded through the **load merge**, **load override**, and **load replace** commands. If you do not add any attributes, the software merges all changes.

- **operation=" create"** —Create the specified configuration.

If you try to create a configuration object that already exists, the software does not create the new objects and generates an error message to that effect.

- **operation=" delete"** —Delete the specified configuration.
- **operation=" merge"** —Merge the specified configuration.
- **operation=" replace"** —Replace a specified configuration with another defined configuration.

If the **replace** attribute is in the file whose contents are merged, the command disregards the **replace** attribute.
