

## Overview of Configuring Subscribers and Subscriptions

---

- Specifying the Activation Order for Subscriptions on page 1
- Inheritance of Properties and Subscriptions on page 1

### ***Specifying the Activation Order for Subscriptions***

You can specify the order in which the SAE activates subscriptions that are set up to activate on login for a particular subscriber. To specify the order, you define a precedence for the activation of each subscription. The SAE activates services in ascending order of precedence; if multiple services have the same precedence, the SAE activates them in an unspecified order.

You can configure the activation order by setting the **activation-order** option when you configure a subscription to a service with the SRC CLI. The enterprise manager portal automatically sets the activation order of some subscriptions to ensure they are activated before other subscriptions that depend on them.

### ***Inheritance of Properties and Subscriptions***

Subordinate subscribers inherit properties and SAE subscriptions from their parent subscribers, unless you specify a different value for the subordinate. Properties that a subscriber can inherit include the maximum number of concurrent logins and the session timeout. For example, if you configure a subscription to a video service for an enterprise and configure a different subscription to the same video service for a site within that enterprise, the site uses its own subscription rather than the inherited subscription.
