

Connecting to the Directory Fields

Use the fields described in this section to configure the connection to the VTA configuration in the directory. In VTA Configuration Manager, you can edit the following fields in the Connecting to the Directory screen.

Directory Host

- Location of the directory in which VTA configurations are stored.
- Value—`ldap:// < IP address or hostname > : < port number > /`
- Default—`ldap://127.0.0.1:389/`

Bind DN

- DN used to authenticate access to the directory.
- Value—DN
- Default—`cn = umcadmin, o = umc`

Static Configuration DN

- Subtree in the directory in which the VTA configuration is stored.
- Value—`< DN >`
- Default—`l = VTA, ou = staticConfiguration, ou = Configuration, o = Management, o = umc`

Configuration Namespace

- Name and path of the configuration file that you want to load from the directory or that you want to commit to the directory.
- Value—Directory path and name of the configuration file. The sample data is in the following files:
 - `/Applications/Bucket`
 - `/Applications/HostCheck`
 - `/Applications/Quota`
- Default—`/Applications/Quota_Test`

Password

- Password used to connect to the directory.
- Value—Valid directory password
- Default—`admin123`
