

Creating Subscriptions to Firewall Services

To create a subscription to a basic firewall service:

1. In the navigation pane of Enterprise Manager Portal, click the subscriber for whom you want to create a subscription to a basic firewall service.
2. Click the **Firewall** tab.

The Firewall page appears.

The screenshot shows the 'Firewall' tab selected in the navigation pane. The page title is 'Welcome to Virneo's Firewall Services.' Below the title, there is a paragraph explaining that the user should select one firewall from the list below and that the selected firewall will be enforced on all internet access links at or below the location selected in the tree on the left. Another paragraph advises considering the locations at which the user will subscribe to a firewall service, noting that a firewall affects all accesses underneath the subscription location and that only one firewall can affect a given access. A third paragraph states that after selecting a firewall, the user will be able to specify exceptions to the firewall's normal behaviour, such as opening a hole in the firewall for specific traffic at a specific site. At the bottom of the page, there is a 'Firewall Service' section with a dropdown menu currently set to 'No firewall' and an 'Apply' button.

3. Click the help icon above the firewall service to review information about the available firewalls.

See Firewall Service Field in Enterprise Manager Portal.

4. Select a firewall service from the menu, and click **Apply**.

The Firewall page changes to allow you to create firewall exceptions.

Firewall Service Field in Enterprise Manager Portal

Use the field in this topic to specify a firewall service in Enterprise manager Portal.

Firewall Service

- Name of the firewall service.
- Value—Menu of firewall services in the directory available for this subscriber
- Default—No Firewall
- Example—BasicFW1
