

Before You Configure VPN Policies and Services

When you configure the SRC software to manage VPNs, complete the following tasks specific to the VPN configuration:

1. Configure the VPNs on the JUNOS routing platform.

See *JUNOS VPNs Configuration Guide*.

All routing instances that implement a specific VPN must have the same name.

2. Add the VPNs to the directory.

The identifier for a VPN in the directory must match the name of the routing instance configured on the JUNOS routing platform.

3. If you want to send traffic associated with BoD services to specific VPNs, configure policies and services for BoD traffic destined for VPNs.

See *Configuring Policies for BoD Traffic Destined for VPNs* and *Configuring Services for BoD Traffic Destined for VPNs*.

4. Implement an addressing scheme for VPNs that allows extranet clients to access the VPNs.
