

## Configuring a File for the Network Publisher

---

To configure the network publisher:

- In a text editor, edit the file `/opt/UMC/nic/etc/networkPublisher/config.properties`.

For information about the fields in this file, see [\[Unresolved xref\]](#) .

Entries in the file have the format `< field > = < value >` .

The network publisher identifies routers by a number; for example, r1, r2.

The network publisher uses the same logging properties as other SRC components.
