

Updating Information About Address Pools

If you associate an existing address pool with an interface and you do not want to wait for this new information to be propagated based on the Cache Entry Age property of the NIC proxy or the Event Life Expectancy property of the agents, then you must manually clear the NIC proxy cache.

To clear the NIC proxy cache when an application is deployed in a J2EE container that supports Java Management Extension (JMX) software, do one of the following:

- Use the NicProxyMgmt MBean.
- Restart the application.
- Restart the application server.
