

Configuring a Directory Connection for the Policy Web Admin

Before you run queries, you need to connect to the directory where policies are stored. To connect to the directory:

1. From the Policy Web Admin main window, click **Dir Connection**.

The Directory Connection page appears.

The screenshot shows the Juniper Policy Web Admin interface. The top header features the Juniper Networks logo and the text "Policy Web Admin" and "Directory Connection". A left sidebar contains a "Policy Web Administration" menu with links to "Home", "Dir Connection" (which is highlighted), and "Tools". The main content area is titled "Connect to the Directory" and contains a "Directory Information" section. This section prompts the user to "Please enter your directory information." and includes several input fields: "Ldap Host" (pre-filled with "ldap://localhost:389/"), "Bind DN" (pre-filled with "cn=pom,ou=components,o=operators,o=UMC"), "Password" (empty), "Base DN" (pre-filled with "o=UMC"), "Policies RDN" (pre-filled with "o=Policies,o=UMC"), and "Parameters RDN" (pre-filled with "o=Parameters,o=UMC"). A "Connect" button is located at the bottom of the form. The footer of the page includes the "Juniper yourNet" logo and a copyright notice: "Copyright © 1998-2003, Juniper Networks, Inc."

2. Enter the connection information for the directory that contains the policies, and click **Connect**.

The Tools page appears.

Policy Web
Administration

- ▶ Home
- ▶ Dir Connection
- ▼ Tools
 - ▶ View Policies
 - ▶ Query

Tools

Now you are ready to use policy tools . You have the following tools:

- [View](#) the policies.
- [Query](#) the system information with regards to Router, QoS Profile and Policy Groups.
