

## Configuring Policies for BoD Traffic Destined for VPNs

---

You can manage policies with the Policies, Services, and Subscribers CLI or the Policies, Services, and Subscribers subtasks in the C-Web interface.

To configure a policy for a BoD service associated with a VPN (a VPN policy):

1. Copy the policy for the BoD service in the directory.
2. Rename the policy you copied to a similar name that indicates this policy is the VPN version; for example, you can use `< bodPolicy > Vpn`, where `< bodPolicy >` is the name of the BoD policy.

For example, if the name of the original policy is `bod`, rename the service you copied to `bodVpn`.

3. Add a new local parameter (the name is arbitrary, for example `vpnName`) of type Routing Instance to the VPN policy.
4. Add a new action of type `RoutingInstanceAction` to the input policy rule, and specify a Routing Instance of `vpnName` for this action.
5. Save the VPN policy.

For a sample VPN policy, see `policyGroupName = bodVpn`, `ou = entjunos`, `o = Policies`, `o = umc` in the sample data. In the sample BoD policies, substitutions in services rename policy parameters to names required by Enterprise Manager Portal.
