

Configuring Access Control for the VACM

To configure the access control for the view-based access control model (VACM):

1. Map an SNMPv1 or SNMPv2c community name to a security name.

See [Associating Security Names with a Community](#) .

2. Define a named view.

See [\[Unresolved xref\]](#) .

3. Map from a group of users or communities to a view.

See [Defining Access Privileges for an SNMP Group](#) .

4. Map a security name into a named group.

See [\[Unresolved xref\]](#) .
