

## Configuring Access Control for the VACM

---

To configure the access control for the view-based access control model (VACM):

1. Map an SNMPv1 or SNMPv2c community name to a security name.

See Associating Security Names with a Community.

2. Define a named view.

See Defining Named Views.

3. Map from a group of users or communities to a view.

See Defining Access Privileges for an SNMP Group.

4. Map a security name into a named group.

See Assigning Security Names to Groups.
