

Allowing Multiple Logins from the Same IP Address

You can specify whether the SAE allows a login from the same IP address without requiring that the previous session logs out first.

- If you enable this setting, the SAE logs in the new subscriber session and automatically logs out the previous session.
- If you disable this setting, the SAE denies login requests if a subscriber session for an IP address is active.

Use the following configuration statement to specify whether or not the SAE allows multiple logins from the same IP address:

```
shared sae configuration subscriber-sessions {  
    allow-same-ip-login;  
}
```

To specify whether the SAE allows a login from the same IP address without requiring that the previous session logs out first:

1. From configuration mode, access the subscriber sessions statement.

```
user@host# edit shared sae configuration subscriber-sessions
```

2. Enable or disable whether the SAE allows a login from the same IP address without requiring that the previous session logs out first.

```
[edit shared sae configuration subscriber-sessions]  
user@host# set allow-same-ip-login
```

3. (Optional) Verify your configuration.

```
[edit shared sae configuration subscriber-sessions]  
user@host# show  
adjust-session-time;
```
