

Adding Subscribers (SRC CLI)

The tasks to configure subscribers are:

- Adding Retailers with the SRC CLI
- Configuring Administrative Information for Retailers with the SRC CLI
- Adding Subscriber Folders with the SRC CLI

The subscriber hierarchy requires that the objects immediately subordinate to retailers be subscriber folders. You can, however, use subscriber folders subordinate to other subscriber objects to organize groups of subscribers.

- Adding Residential Subscribers with the SRC CLI
- Adding Enterprises with the SRC CLI
- Configuring Administrative Information for Enterprise Subscribers with the SRC CLI
- Adding Sites with the SRC CLI
- Adding Devices as Subscribers with the SRC CLI

After you add subscribers, you can add managers and configure subscriptions.
