

## Configuring an Interim Accounting Interval for Service Accounts

---

You configure VTA service accounts in the Database Engine Service section of the Database Engine Processor configuration page. For example:

### Database Engine Service

<a href="#">QuotaLocal</a>	<input type="button" value="Delete"/>
<a href="#">QuotaInternet</a>	<input type="button" value="Delete"/>
<b>New Database Engine Service</b>	<input type="text"/>
<input type="button" value="Create"/>	

You can create, delete, or modify accounts:

- To add an account, enter a name for the account in the New Database Engine Service field, and click **Create**.
- To delete an account, click **Delete** next to the account that you want to delete.
- To modify an account, select the account that you want to modify.

If you create or modify an account, the account configuration screen appears.

VTA Configuration Manager
Edit Configuration

- Home
- Dir Connection
- Configuration
  - Create
  - Edit
  - Load
  - Commit
  - Import
  - Export
