

## Adding a Configuration Through Configuration Mode Commands

---

When you use the `load set` command, it executes the configuration instructions line by line as they are stored in a file. The instructions can contain any configuration mode command, such as `set`, `edit`, `exit`, and `top`.

To load a configuration that contains configuration mode commands:

1. Create a text file that includes `set` and other configuration mode commands. For example:

```
edit system login class name newclass permissions system
delete system login class name newclass permissions interface
set system login class name newclass permissions configure
```

2. In configuration mode, use the `load set` command.

```
user@host# load set newcfg2.txt
```
