

## Getting Help for Omitted Statements

---

If you omit a required statement at a particular hierarchy level, when you issue the `show` command in configuration mode, a message indicates which statement is missing. For example:

```
user@host# show system
user test {
  class subscriber-control; ## Warning: Undefined class 'subscriber-control'
  full-name test;
  uid 503;
  gid 100;
  authentication {
    encrypted-password "{crypt}0N50d4BqvwpKY";
  }
}
```
