

Restarting an SRC Component

If an SRC component is enabled, you can restart it if needed. You can use one of the following methods to restart a component:

- **gracefully**— Shuts down the component, then starts it again. (Default)
- **immediately**— Sends a signal kill (SIGKILL) signal to immediately stop the component, then starts it again.
- **soft**—Sends a signal hangup (SIGHUP) signal to the process for the component, then starts it again.

To restart an SRC component:

- In operational mode, use the **restart component** command.

```
user@host restart component component <gracefully | immediately | soft>
```

For example, to restart the SAE gracefully:

```
user@host restart component sae gracefully
```
