

Loading a Configuration at a Specified Hierarchy Level

The `load merge`, `load replace`, and `load set` commands let you load the configuration at a specified hierarchy level by using the `relative` option.

To load a configuration at a hierarchy level:

1. In configuration mode, move to the hierarchy level at which you want to load a configuration.
2. At the hierarchy level, enter a `load merge`, `load replace`, or `load set` command.
For example:

```
[edit system login class name newclass]  
user@host# load merge mynewcfg.xml relative format xml
```
