

## Renaming an Identifier

---

To modify a configuration, you can rename an identifier that already exists. You can do this either by deleting the identifier (using the **delete** command) and then adding the renamed identifier (using the **set** and **edit** commands), or you can rename the identifier using the **rename** mode command:

```
user@host# rename < statement-path > identifier1 to identifier2
```

### Example: Renaming an Identifier

Change the Network Time Protocol (NTP) server address to 10.0.0.6:

```
[edit]
```

```
user@host# rename system ntp server 10.0.0.7 to server 10.0.0.6
```
