

Testing the VTA Configuration

To test the VTA configuration:

1. On the administrator portal, scroll to the Test VTA Configuration area.
2. Click **Test** to generate a simulated event for testing.

The VTA Configuration Tester page appears.

The screenshot shows the 'VTA Configuration Tester' web page. At the top left is the Virneo logo with the tagline 'The network that keeps you surfing'. At the top right, it says 'Welcome administrator admin'. Below this is a blue navigation bar with 'Virneo Customer Care'. The main content area has a yellow background and is titled 'VTA Configuration Tester'. Inside this area is a white box containing the form. The form has two input fields: 'SUBSCRIBER ID' and 'EVENT TYPE' (which is a dropdown menu). Below these fields are three buttons: 'Send', 'Save', and 'Reset'. Further down is another input field followed by 'Browse...' and 'Load' buttons. At the bottom of the white box is a button labeled 'Return to Administrative Page'.

3. Enter the subscriber ID and event type. The corresponding Web page for the specified event type appears.
4. Enter the event attributes to test, click **Send** to process the event in the Quota VTA, and print the results into VTA log files. You can also load an event from a file by selecting the file with **Browse** and clicking **Load**.
5. (Optional) Save the event created in the VTA Configuration Tester to a file by clicking **Save**.
