

Troubleshooting Data Synchronization for Juniper Networks Databases (SRC CLI)

Problem Data in a community of Juniper Networks databases may not be synchronized.

Solution 1. Obtain information about the replication status of Juniper Networks databases in a community by running the **show system ldap community** on system that runs the primary Juniper Networks database:

```
user@host> show system ldap community
```

The command output indicates that the databases are not synchronized by:

- Quantity of changes since last startup
 - Start and end time of last update
 - Status of last update
2. If the databases are not synchronized, initialize neighbors in the community from the primary Juniper Networks database:

```
user@host> request system ldap community initialize neighbor neighbor 1
```

where neighbor1 is the name of the neighbor to be synchronized.
