

## Troubleshooting Database Deadlocks

---

**Problem** The JBoss application server logs the following error when the database reports a deadlock—a condition in which the database operation cannot continue because two processes are both waiting for the other process to be completed before they proceed.

`java.sql.SQLException: General error, message from server: "Deadlock found when trying to get lock; Try restarting transaction"`

**Solution** Deadlocks can occur for a variety of reasons in normal database operation. The SRC-VTA resolves deadlocks in the database, and you should ignore this message.
