

Displaying Statistics About the ACP Configuration with the CLI

Purpose

Action

Redundancy State in the navigation menu. The Redundancy State Web page provides information about the status of the ACPs in the redundancy configuration, including its synchronization state with the SAE.

The screenshot shows the Juniper Networks Admission Control Plug-in web interface. The top navigation bar includes the Juniper Networks logo and the text "Admission Control Plug-in" and "Redundancy State". On the left, a sidebar menu titled "AdmissionControl System" lists options: Home, Edge, Backbone, Configuration, Redundancy State (highlighted), Remote Update, and Tools. The main content area is titled "Admission Control Plug-in redundancy state:" and contains a table labeled "Redundancy State".

| Attribute | Value |
|--------------------------|----------------------------|
| Role: | Master |
| Sync queue size: | 0 |
| Remote redundancy ior: | file:///var/acp/remote.ior |
| Remote redundancy state: | Down |
| State sync with SAE: | Out of sync |

The bottom of the page features the "Juniper yourNet" logo and a copyright notice: "Copyright © 1998-2005, Juniper Networks, Inc."
