

## Viewing the Route Information

---

**Purpose** You can use the `traceroute` command to get information about the hops between the local system and a remote host.

**Action** To view route information:

```
user@host> traceroute 192.2.7.48
traceroute to 192.2.7.48 (192.2.7.48), 30 hops max, 46 byte packets
 1 host (192.2.7.45) 3000.716 ms !H 3000.733 ms !H 3001.272 ms !H
```

For information about all the options for the `traceroute` command, see the *SRC-PE CLI Command Reference*.
