

## Verifying a Configuration

---

**Purpose** Verify that the syntax of a configuration is correct.

**Action** Use the configuration mode **commit check** command.

```
[edit]
user@host# commit check
configuration check succeeds
[edit]
user@host#
```

If there is an error in the configuration syntax, the **commit check** command returns a message that indicates the location of the error. For example:

```
[edit]
user@host# commit check
[edit shared sae configuration driver]
missing mandatory attribute(s): 'unauthenticated-subscriber-dn', 'mac-cache-expiration'
```
