

Overview of VPN Management Through Enterprise Manager Portal

You can use the SRC software to allow IT managers to manage layer 3 VPNs on JUNOS routing platforms. This type of VPN supports membership based on filter-based forwarding policies.

You can configure Enterprise Manager Portal to display VPN features. IT managers can modify VPNs and send traffic associated with BoD subscriptions to specific VPNs. In addition, if you configure Enterprise Manager Portal to display extranet features, IT managers with privileges to configure VPNs can create extranets for other enterprises and retailers by exporting those VPNs. Enterprises and retailers who share VPNs that other subscribers own are called *extranet clients*.

To provide VPN services from Enterprise Manager Portal, you create corresponding VPN versions of the BoD services and their associated policies.
