

Using BoD Services to Assign Traffic to Bandwidth Categories

You can use BoD services to assign different classes of traffic to different bandwidth categories, with each category identified by a specified quantity of bandwidth.

For example, a configuration could provide two services:

- Silver—Bandwidth of 500,000 Mbps
- Gold— Bandwidth of 1,000,000 Mbps

Each service has the specified bandwidth available to specified traffic flows, based on the policy rules for traffic classification and policing.
