

## Example: Managing Specific Interfaces

---

This example causes the SAE to load the DHCP policy group on IP interfaces on Fast Ethernet modules in slot 3/port 1, slot 1/port 1, or any port on slot 2. The SAE then manages these interfaces.

```
[edit shared network device erx-node2 interface-classifier rule rule-1]
user@host# show
target /junose/DHCP;
condition {
    interfaceName=FastEthernet3/1;
    interfaceName=FastEthernet1/1;
    interfaceName=FastEthernet2/*;
}
```
