

## Setting Up Enterprise Service Portals

---

Tasks to install an enterprise service portal are:

1. Preparing the Web Applications for Customization
2. Configuring Connections to the Directory
3. (Enterprise Manager Portal only) Configuring Deployment Settings for Enterprise Manager Portal
4. Configuring the URL for an Enterprise Service Portal

After you install an enterprise service portal:

- If you use a machine to administer public IP addresses in conjunction with NAT Address Management Portal, write an application to handle the interaction between the machine and this portal. See [Writing an Application to Allow a Machine to Provide Public IP Addresses for NAT](#).
- If you use Enterprise Manager Portal, NAT Address Management Portal, or an application that uses a configuration file based on the `easp_conf` template, see [Configuring an Enterprise Service Portal Audit Plug-In](#).
