

Sending Traffic to a VPN

If the service provider makes VPN features visible to subscribers, the name of the Bandwidth tab in the portal changes to Bandwidths & VPNs, and you can send traffic associated with BoD services to VPNs. To do so:

1. In the navigation pane of Enterprise Manager Portal, click the subscriber for whom you want to send traffic to a VPN.
2. Click the **Bandwidth and VPNs** tab.
3. Configure a BoD service.
4. From the menu in the Destination VPN field for that subscription, select the VPN to which you want to send the traffic.
5. Click **Create** for the subscription.
