

## Configuring Mark Actions

---

Use this action to mark packets. You can configure mark actions for JUNOS and PCMM policy rules.

The type of action that you can create depends on the type of policy rule. See Policy Information Model.

Use the following configuration statements to configure a mark action:

```
policies group name list name rule name mark name {  
    description description ;  
}  
policies group name list name rule name mark name info {  
    value value ;  
    mask mask ;  
}
```

To configure a mark action:

1. From configuration mode, enter the mark action configuration. For example, in this procedure, markAction is the name of the mark action.

```
user@host# edit policies group junose list mark rule pr mark markAction
```

2. (Optional) Enter a description for the mark action.

```
[edit policies group junose list mark rule pr mark markAction]  
user@host# set description description
```

3. (Optional) Configure the mark value.

```
[edit policies group junose list mark rule pr mark markAction]  
user@host# set info value value
```

4. (Optional) Configure the mark mask.

```
[edit policies group junose list mark rule pr mark markAction]  
user@host# set info mask mask
```

5. (Optional) Verify the mark action configuration.

```
[edit policies group junose list mark rule pr mark markAction]  
user@host# show  
info {  
    mark-value 10;  
    mask 255;  
}  
description "Mark action";
```
