

## Configuring a Redundant Redirect Server (C-Web Interface)

---

Although configuration of a redundant redirect server is optional, we recommend that you configure redundancy to maintain high availability for the server.

Before you configure the redirect server, review configuration prerequisites. See [Before You Configure Redundancy for a Redirect Server](#).

To configure redundancy for the redirect server:

1. Click **Configure > Redirect Server**.

The Redirect Server pane appears.

2. To enable or disable redundancy for the redirect server, clear (or select) the Redundancy checkbox as described in the Help text in the main pane.
