

Configuring the JUNOS Routing Platform to Apply Changes It Receives from the SAE

To configure the JUNOS routing platform to receive configuration statements from the SAE and apply those statements to the configuration:

1. Create a configuration group called `sdx` that contains the configuration statements that the SAE sends to the JUNOS routing platform. To do so, include the `groups` statement at the `[edit]` level, and specify the name `sdx`.

```
[edit]
groups {
  sdx;
}
```

2. Configure the JUNOS routing platform to apply these statements to the configuration. To do so, include the `apply-groups` statement at the `[edit]` level.

```
[edit]
set apply-groups sdx;
```
