

Configuring Services for BoD Traffic Destined for VPNs

You can manage services with the Policies, Services, and Subscribers CLI or the Policies, Services, and Subscribers subtasks in the C-Web interface.

To configure a BoD service that will be associated with a VPN (a VPN service):

1. Copy the BoD service in the directory.
2. Rename the service you copied to `< bodService > _VPN`, where `< bodService >` is the name of the original BoD service.

For example, if the name of the original BoD service is called Gold, rename the service you copied to Gold_VPN.

3. Add to the VPN service a parameter with a name that matches the parameter of type Routing Instance that you defined in the policy.

See Configuring Policies for BoD Traffic Destined for VPNs.

`!vpnName=bodVpnName`

4. Modify the VPN service to use the corresponding VPN policy that you created.
5. Save the service.

For a sample VPN service, see `serviceName = Gold_VPN`, `l = entJunos`, `o = Scopes`, `o = umc` in the sample data.
