

Disregarding Output That Does Not Match a Regular Expression

If the regular expression contains any spaces, operators, or wildcard characters, enclose it in quotation marks.

For information about common regular expression operators, see [\[Unresolved xref\]](#).

To disregard text that matches a regular expression:

- Specify the **except** command after the pipe symbol.

The following example displays information about configuration interfaces with the exception of the family information for each interface:

```
user@host> show configuration interfaces |except family
lo {
  unit 0 {
    inet {
      address 192.0.0.1;
    }
  }
}
eth0 {
  unit 0 {
    inet {
      address 10.27.7.45/24;
    }
  }
}
```
