

Preventing Output from Being Paginated

By default, if output is longer than the length of the terminal screen, a **MORE** message lets you display the remaining output when you press the Spacebar. You can use the **| no-more** filter to display all output at once. This feature is useful when you want access to the entire output, such as to copy the entire output and paste it into an e-mail message.

To prevent the output from being paginated:

- Enter **no-more** after the pipe symbol.

For example, to display all output from the **show configuration** command at once:

```
user@host> show configuration | no-more
```
