

Importing a VTA Configuration from a Local File

If your VTA configuration is stored in a local file, you need to import the file into VTA Configuration Manager. To do so:

1. In the VTA Configuration Manager navigation pane, select **Import**.

The Import Configuration page appears.

The screenshot shows the Juniper Networks VTA Configuration Manager interface. The top header features the Juniper Networks logo and the title 'VTA Configuration Manager' with a sub-tab 'Import Configuration'. On the left is a navigation pane with a tree structure: 'Home', 'Dir Connection', 'Configuration' (expanded), 'Create', 'Edit', 'Load', 'Commit', 'Import' (highlighted), and 'Export'. The main content area is titled 'Import:' and contains the instruction 'Please choose a property file from the local file system.' Below this is a form with a 'From file:' label, a text input field, and a 'Browse...' button. At the bottom of the form are 'Finish' and 'Cancel' buttons. The footer of the page displays the 'Juniper yourNet' logo.

2. Enter the filename and path in the From file field, or click **Browse** and select a file from the local host.
3. Click **Finish**.
