

## Viewing Information About Congestion Points in a Backbone Network by DN

**Purpose** View information about congestion points in a backbone network by DN.

**Action** To view information about congestion points by DN:

1. Click **ACP > Backbone > Congestion Point > DN**.

The Backbone/Congestion Point/DN pane appears.

The screenshot shows the Juniper Networks configuration interface. The top navigation bar includes 'Monitor', 'Configure', 'Diagnose', and 'Manage'. The user is logged in as 'admin'. The left sidebar lists various configuration categories: ACP, CLI, Component, Date, Disk, Interfaces..., Iptables..., JPS, NIC, NTP, Redirect Server, Route..., SAE, Security, and System. The main content area is titled 'ACP' and 'Backbone / Congestion Point / DN'. It contains four input fields: 'Congestion Point Dn', 'Slot', 'Style', and 'Virtual Router Name'. Each field has a description and default value. The 'Congestion Point Dn' field is for listing matching congestion points. The 'Slot' field is for configuring values for a specific slot. The 'Style' field is for selecting an output style (brief or detail). The 'Virtual Router Name' field is for listing congestion points from a specific virtual router. There are 'OK' and 'Reset' buttons at the bottom of the form.

Field	Description	Default Value
Congestion Point Dn	DN of congestion point for which you want to list all matching congestion points.	No value
Slot	Number of the slot for which you want to configure values.	0
Style	Output style. Choices: brief: Display congestion point DN	detail
Virtual Router Name	Name of virtual router from which to list congestion points.	No value

2. In the Congestion Point DN box, enter a full or partial congestion point name to display information about one or more specific congestion points, or leave the box empty to display information about all congestion points.
3. In the Slot box, enter the number of the slot for which you want to display congestion point information.
4. Select an output style from the Style list.
5. In the Virtual Router Name box, enter a virtual router name to display information about a specific virtual router, or leave the box empty to display information about all virtual routers.
6. Click **OK**.

The Backbone/Congestion Point/DN pane displays a list of congestion points.
