

Configuring Monitoring Agent to Receive RADIUS Accounting Messages

If you install the Monitoring Agent application on the same host as the RADIUS server, you must disable the `MonAgent.radius.server` property.

You can configure Monitoring Agent to act as a pseudo-RADIUS server that listens for RADIUS accounting packets sent to the RADIUS accounting port. To receive RADIUS packets from RADIUS clients:

- Make sure there is no other RADIUS server listening on the RADIUS accounting port, and enable the `MonAgent.radius.server` property.
- Configure the shared secret between the RADIUS server and the RADIUS client by specifying the `MonAgent.radius.secret. <IP address>` property.

For information about installing and using Monitoring Agent, see the *SRC Sample Applications Guide*.
