

Overview of Web Service Interface for PCMM

PCMM Web Service Interface Specification (PKT-SP-MM-WS-101-051221) defines a common Web service SOAP/XML interface between a generic application server and a PCMM application manager. The interface allows an application server to dynamically request resources on the cable operator's access network. It provides operations for requesting, releasing, and querying network resources on the cable network. The SRC PCMM Web service interface supports the following operations, which are specified in the PCMM Web service interface:

- CommitResources
- ReleaseResources
- QueryAvailableServices
- QueryContexts

Each of these operations is implemented as a method in the SRC PCMM Web service interface.
