

Before You Install the SRC Applications

Before you install applications, install necessary Solaris patches on the installation host, make sure that you understand if you want to root or nonroot users to have access to install and configure the application, and establish users and groups for software administration.

Before you install the UMCthma or UMCvtacnf package, install JBoss on the Solaris host. You can obtain the JBoss software in the **SDK+AppSupport+Demos+Samples.tar.gz** file available on the Juniper networks Web site at:
<https://www.juniper.net/support/csc/swdist-erx/src.html>.

The SRC applications are distributed as Solaris packages or Web application archive (WAR) files.
