

## Example: Managing Interfaces by Using the Interface Description

---

This example causes the SAE to load the DHCP policy group on any interface where the ifAlias starts with DHCP-subscribers.

```
[edit shared network device erx-node2 interface-classifier rule rule-2]
user@host# show
target /junose/DHCP;
condition {
    ifAlias=DHCP-subscribers*;
}
```

For this approach, you will need to use the `ip description` command to configure interface aliases that begin with DHCP-subscribers for all interfaces that support DHCP subscribers.
