

Configuring the Redirect Server to Support HTTP Proxies (C-Web Interface)

Support for proxy requests is an optional feature of the redirect server. If you configure proxy support, you must also have DNS configured. You can use DNS servers already installed on your network, or use the server included with the SRC software.

To configure the redirect server to support HTTP proxies:

1. Click **Configure > Redirect Server**.

The Redirect Server pane appears.

2. Clear the Proxy Support checkbox box to disenable HTTP proxy support. Select the checkbox to enable HTTP proxy support. Refer to the information in the Help text in the main pane.
3. In the Destination Url box, type the URL sent as a response to proxy requests.
4. Click **Apply**.
