

## Defining Attributes for Service Activation (SRC CLI)

---

Use the following statement to configure attributes for service activation:

```
schedule name event name action name attribute (sessionName | sessionTag |  
    sessionTimeout | downStreamBandwidth | upStreamBandwidth) {  
    value;  
}
```

To define the attributes:

1. From configuration mode, access the configuration statement that configures the service schedule for the objects for which you can create a service schedule.
2. Specify the value for the attribute that is set before the service is activated.

```
user@host# set attribute (sessionName | sessionTag | sessionTimeout |  
    downStreamBandwidth | upStreamBandwidth) value
```

Subscription attributes apply only to service activations.
