

Assigning Security Names to Groups (C-Web Interface)

For SNMPv1 or SNMPv2c packets, you must assign security names to groups and you must associate a security name with an SNMP community.

To map security names to groups for the VACM:

1. Click **Configure**, and expand **SNMP > V3 > VACM**.
2. Expand the desired **Security Model** and desired **Security Name**, enter information as described in the Help text in the main pane, and then click **Apply**.
