

Sending SRC License Usage Reports to Administrators (C-Web Interface)

Send license usage reports to system administrators or others to have them monitor the maximum number of concurrent active SAE service sessions and compare that number with the number allowed by the server license.

To specify users to receive SRC license usage reports:

1. Click **Configure**, expand **Shared > License Server > Email**.

The Email pane appears.

2. Enter information as described in the Help text in the main pane, and click **Apply**.
