

Testing the VTA Configuration

To test the VTA configuration:

1. On the administrator portal, scroll to the Test VTA Configuration area.
2. Click **Test** to generate a simulated event for testing.

The VTA Configuration Tester page appears.

The screenshot shows the 'VTA Configuration Tester' web interface. At the top left is the Virneo logo with the tagline 'The network that keeps you surfing'. At the top right, it says 'Welcome administrator admin'. Below a blue navigation bar labeled 'Virneo Customer Care', the main content area is titled 'VTA Configuration Tester'. This area contains a form with two input fields: 'SUBSCRIBER ID' and 'EVENT TYPE' (a dropdown menu). Below these fields are three buttons: 'Send', 'Save', and 'Reset'. Further down is a file upload section with a text input, a 'Browse...' button, and a 'Load' button. At the bottom of the form is a 'Return to Administrative Page' button.

3. Enter the subscriber ID and event type. The corresponding Web page for the specified event type appears.
4. Enter the event attributes to test, click **Send** to process the event in the Quota VTA, and print the results into VTA log files. You can also load an event from a file by selecting the file with **Browse** and clicking **Load**.
5. (Optional) Save the event created in the VTA Configuration Tester to a file by clicking **Save**.
