

Viewing Information About Filtered Traffic (C-Web Interface)

Purpose View information about filtered traffic with the **iptables Linux** tool when you are using C-Web to monitor the C-series controller.

Action To view information about the filtered traffic:

1. Click **Monitor > Iptables**.

The Iptables pane appears.

2. Select the type of table that you want to display from the Table list:
 - nat—Displays information for the iptables NAT table
 - filter—Displays information for the iptables filter table
 - mangle—Displays information for the iptables mangle table
3. Select the **Reset Counters** check box to reset the counters of items in the output.
4. Click **OK**.

The Iptables pane displays information about filtered traffic.
