

Predefined Login Classes for the SRC Software

Table 1 on page 1 lists the system login classes predefined in the SRC software.

Table 1: Default System Login Classes

Login Class	Permission Options Set
operator	clear, network, reset, view
read-only	view
super-user	all
unauthorized	None

NOTE: You cannot modify a predefined login class name. If you issue the **set** command on a predefined class name with the SRC CLI, the software will append **-local** to the login class name. The following message also appears:

warning: '< class-name >' is a predefined class name; changing to '< class-name >-local'

You cannot issue the **rename** or **copy** command on a predefined login class with the SRC CLI. Doing so results in the following error message:

error: target '< classname >' is a predefined class
